

Enclosures-Moving

Moving an enclosure refers to an actual physical move from one location to another location within your facility. This does not mean dragging and dropping enclosures within the Enclosure Tree to correct their order. See Enclosures-Managing the Tree for that functionality.

Record Enclosure Move screen

- 1) Current Parent Name - prefills with the Parent of the enclosure in focus, this is not editable
- 2) Move Date - use the date that you moved the enclosure from one location to another
- 3) New Enclosure Location - free text field to help you identify where the enclosure is now located
- 4) New Parent Enclosure - record what enclosure you moved this enclosure into (ie the new parent)
- 5) Enclosure Move Reason - select the reason from the data standard list
- 6) Descriptions - further free text details regarding the move. Save.

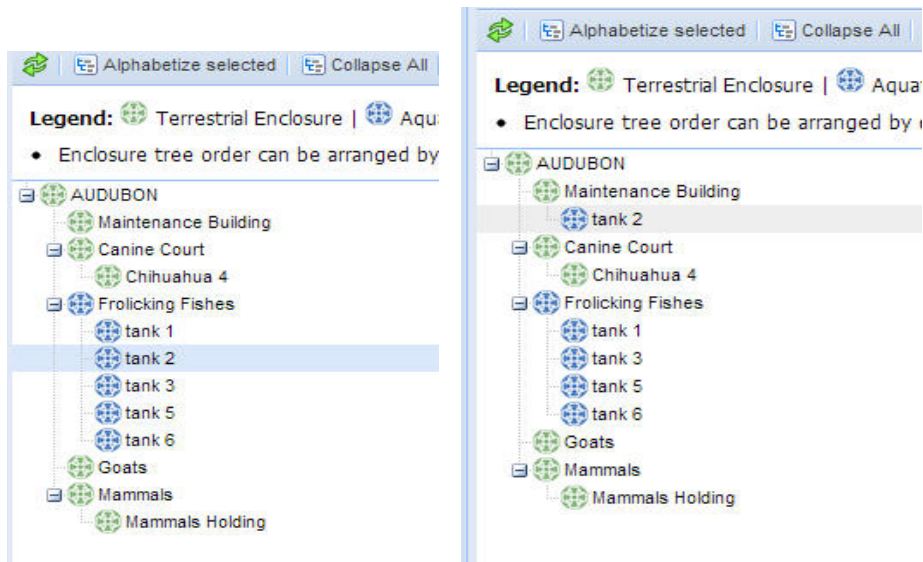

Result

The move will be displayed in the Enclosure Move grid:

| Move Date | Parent Name | Location | Move Reason |
|--------------|----------------------|-------------------|-------------|
| Jan 16, 2013 | Maintenance Building | north of entrance | Maintenance |
| Jan 01, 2013 | Frolicking Fishes | | - |

The enclosure will be moved in the the tree:

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.

Revised 10 August 2017

** Species360 Organizational name change added on 07/18/2016*

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.
