Medical Term Dictionary

How to search for and manage medical terms <u>Contact Species360 Support</u>

The Medical Term Dictionary can be used to search for medical terms, as well as add local medical terms and create group terms (a place holder used for future reports). Medical terms will be used in notes for diagnosis, procedures, prescriptions, etc.

Go to Start > Medical > Dictionary> Term Dictionary

	Search Term Groups							

Term search results will populate in a tab.

1.Select if you want to find Global, Local or All Terms.

2.If you know the Term, this is a free text box where you can enter it.

3.Term Type is a multiple select data standard of types such as Clinical Sign, Medical Modifier and Procedure.

4.Term Group is a single select data standard for groupings such as Digestive System, Wounds and Infectious Disease.

5.Select your language – ZIMS is available in English, Spanish, Russian and Japanese.

6.You can select to view only your Preferred Terms or only Obsolete Terms.

7.Display Options allows you to translate to one of the other languages available in ZIMS.
