

Medical Moments

Calendar Tasks

Your polar bear cub has developed diarrhea. You are not sure if it is because he pulled another bear's food dish into his den and consumed the yummy contents not meant for him, or if there is something else causing his distress. You take a fecal sample today and find *Nanophyetus salmincola*.

You begin treatment but want to remember to request another sample to be taken in one week and another in two weeks. Using the Calendar

Tasks option you schedule the fecal collections and assign them to the Team that cares for the polar bears. The task will appear on My Calendar for all the Team members so they don't forget.

They're counting on you for their medical care. We can help.
