

Q: We've had a lot of maintenance on our enclosures recently. I want to record it in the enclosure records as well as all the animal records for the occupants that may be impacted by the maintenance. This is going to take forever, isn't it?

A: Apply to All Enclosure Occupants to the rescue!

Go into the enclosure record, or if multiple enclosures use the Batch Actions functionality. Record the maintenance information and check the Apply to All Enclosure Occupants checkbox. Once you save, the information will go into the enclosure record AND the record of all occupants of the enclosure(s). Apply to All Enclosure Occupants can be used for Notes & Observations too!

Many thanks to Tina Bouttle from The Wildfowl & Wetlands Trust, who submitted this tip!
