

## Enclosures-Alert Search

Allows you to search for Alerts generated for an Enclosure.

[Contact SPECIES360 Support](#)

The Alert search is found in the Enclosure module under the left hand expandable search box.

The screenshot shows a software interface for searching alerts. It features a search box for 'Enclosure' (1), a text input for 'Alert Text' (2), a dropdown menu for 'Alert Priority' (3) with 'Please Select' as the current value, and date pickers for 'Start Date' (4) with 'From:' and 'To:' labels. Below these are three checkboxes: 'Include Removed Alerts' (5), 'Include provisional data', and 'Show only provisional data' (6). At the bottom of the search section are 'Reset' and 'Search' buttons. The interface is part of a larger 'Maintenance Search' window.

1. Enclosure - Sourced from the Enclosure Tree.
2. Alert text - Text that was recorded in the Alert. If more than one word is entered in this field the results will include only those found for the order of the text entered here.
3. Alert Priority - The Priority entered for the Alert - High, Medium or Low.
4. Start Date - The date range where the Alert was recorded as Starting.
5. Include Removed Alerts - if this box is not checked only active Alerts will be found. To find any Alerts that have been Removed you will need to check this box.
6. You have the option to include Provisional data.
