Medical Test Dictionary
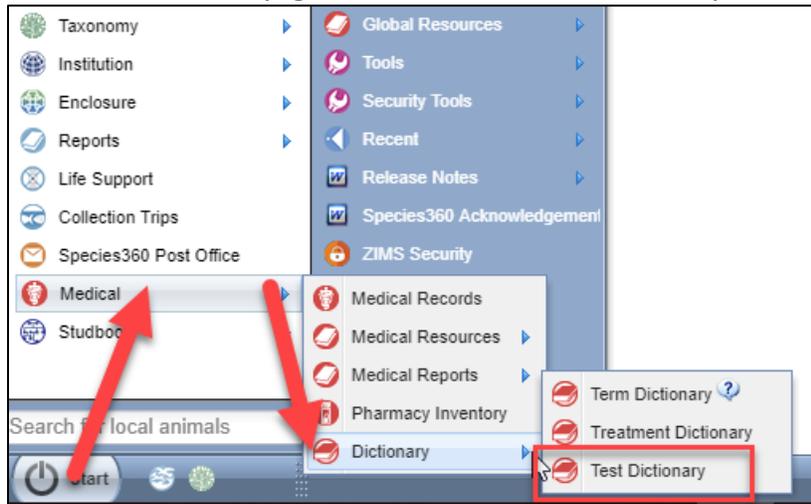

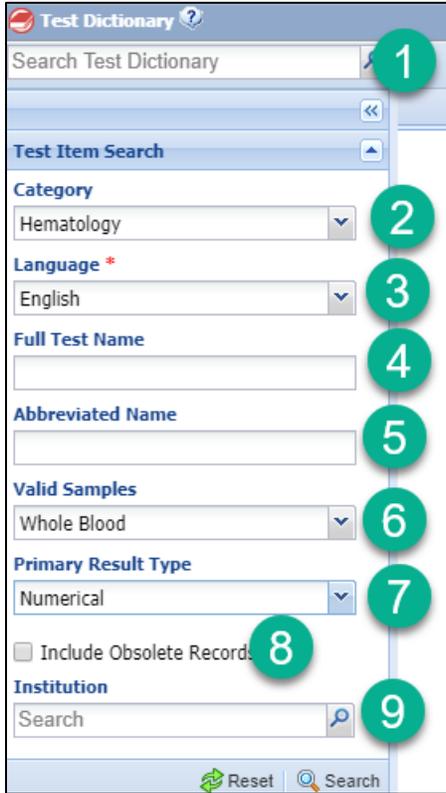

How to search for and manage medical tests
Contact Species360 Support

The Medical Test Dictionary can be used to search for general medical tests. These tests are added at the Global level by Species360. You cannot add a new Test to this dictionary. To request a new Test be added, use the Global Test Request form available in the ZIMS Help Menu.

To use the dictionary, go to Start > Medical > Dictionary > Test Dictionary
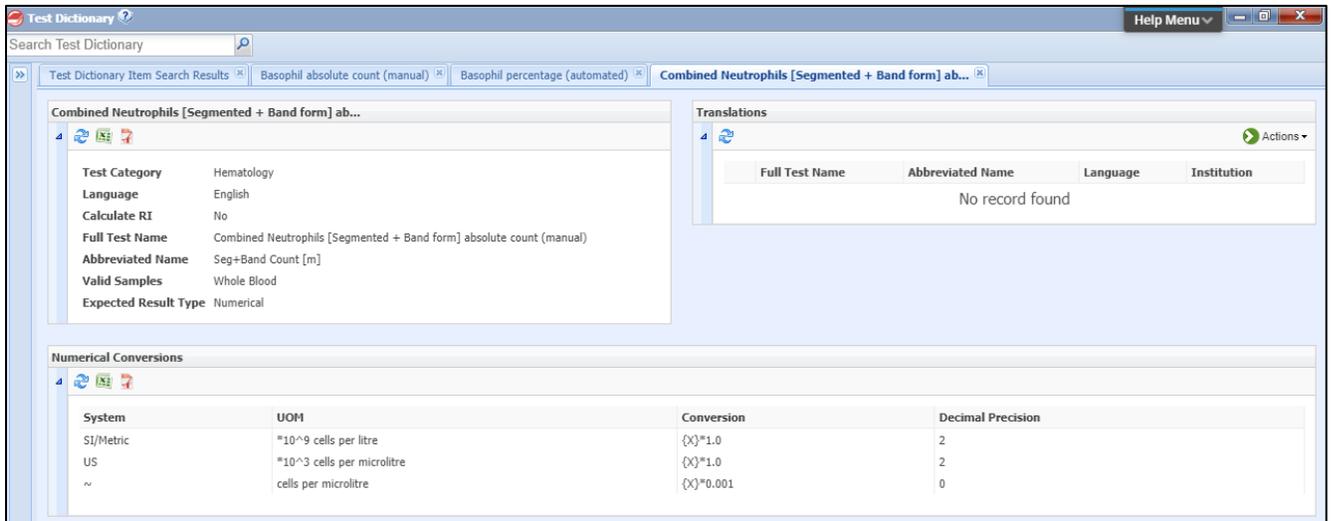

SPECIES 360 | Global information serving conservation.

1. If you know the name of the Test you can search for it using this Type Ahead lookup.
2. Category is a data standard list of test categories such as hematology and toxicology.
3. Select your language.
4. Full Test Name is a free text field.
5. You can also look for any abbreviated Test Names, usually much easier than using the full Test Name.
6. Valid Samples is a data standard of Sample types such as whole blood, feces and colostrum.
7. Primary Result Type is a data standard of types of results expected such as numerical and text.
8. Check this box to include any records marked as Obsolete.
9. If a Translation (synonym) has been recorded by an institution you can search for it here.

From your search results grid, selecting the Test Name hyperlink will take you in to details about the Test.
