You must first record a Prescription on the Aquatic enclosure from the Medical module. Open Medical Records > New > Aquatic Enclosure Prescription. This is typically done by a member of your medical team, but access to record an enclosure prescription can be given to staff other than Veterinarians, such as Lead Aquarists, who often will record enclosure treatments.

Begin treatment on 2 April 2019. 30 days.	. Administer initial dose of 20 ml of COPPER to Grass Flats to achieve a treatment level of 2 ppm. Treat enclosure as needed for

The start date cannot be earlier than the date written. Choose your drug and treatment concentration. If the system volume for the enclosure has been defined, it will prefill, you have the option to edit. If the drug concentration, system volume and treatment concentration are all included, ZIMS dose calculator will determine the amount of drug needed. The Generate Staff Instructions button will take the information you have entered and create treatment instructions for Staff. To print these instructions, use the Print Staff Instructions option.
