

STUDBOOK DATA QUALITY ERROR NOTE

How to add a note associated with a Data Quality Error in ZIMS for Studbooks.

Contact support@Species360.org

A note box is associated with each Data Quality Error and you can choose to add a note or not. Notes can be especially helpful for data that ZIMS interprets as an error but is actually not. An example would be the error that the Sire was deceased before the conception date for a parma wallaby. This often happens because of embryonic diapause and is not an actual error.

To add a note, select the Add Note icon to the right of the error.

Studbook ID	GAN	Current Location	Current Local ID	Sex Type
781		MANTEO		Male
1878		MANTEO	11878	Male

Record the note as desired and Save.

EM-22 No acquisition transaction after wild or unknown birth

"Source Sans Pro" | **B** | *I* | U | T[•] | T^ˆ | I | [Icons]

Animal remains in the wild, there is no transaction after the wild birth.

I

If there is a note associated with an error the icon will be filled in. The top error has a note, the bottom error does not. You can read the note by hovering over it.

Studbook ID	GAN	Current Location	Current Local ID	Sex Type	Birth Date
1519		MANTEO	11519	Male	Apr 18, 2006 +/- 1 day
781		MANTEO			
1878		MANTEO	11878	Male	Apr 25, 2011 +/- 1 day

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.

Click on the note icon to edit the note or delete the note by selecting the Delete button.

The notes added in the data quality list will display in the Animal Notes grid in Animal Detail screen.

Animal Notes					
Date	Note Type	Note Sub Type	Keywords	Comment	Recorded By
Apr 18, 2006	General		Data Migration - Contraception	This animal was once marked 'Not C...	Data Migration Process
Nov 21, 2014	General		PopLink Assumption Note	A Go LTF event has been added since ...	Data Migration Process
Oct 26, 2020	General	Data Quality	(DISMISSED) EM-22 No acquisition ...	Animal remains in the wild, there is n...	Adrienne Miller

The following Rules apply:

- You can only delete a note from the Data Quality list. You can edit notes linked to data quality errors in the Animal Notes grid (editing here will update the note in the Data Quality list) but you cannot delete a note linked to a Data Quality error from the Animal Notes grid.
- Each error can have only one note. If there are multiple errors for an animal, each error can have a note.
- You can add/edit/delete notes on active or dismissed errors.
 - If an error is dismissed the associated note keywords will be updated to display DISMISSED.
 - If an error is resolved (no longer displays in the Data Quality list) the note will remain in the Animal Notes grid with RESOLVED added to the keyword. Now that the error note is no longer linked to a data quality error, you can delete it from the notes grid.
- Functionality is available under the Edit Role control for Data Quality. If edit access is granted by the Regional Association/Institution, you can add/edit/delete notes. If you only have view access to Data Quality you can only view notes.
- These notes can be rolled back in Data Entry Monitoring.
