## **Birth/Hatch Date and Event Locations**

How to add/edit an event location to an animal record in ZIMS.

## Contact SPECIES360 Support

The Event Location grid captures the location for the following Events:

- Birth
- Release to Wild
- Capture From Wild
- Egg Laid
- Conception
- Rescue
- Hatch
- Missing Location

The Birth/Hatch Date and event Location grid is found under the More Details tab in the animal record.

As for other grids, the Add New/View/Edit/Delete options are found under the Action menu. Often this information is sourced from other data entry screens and cannot be edited or deleted from this grid. The following Rules apply:

- If the Event Location information is sourced from the data entry screen for that specific transaction type, you will be taken back to the My Transaction entry screen to edit or delete it.
  - EXAMPLE: A **<u>Birth Location</u>** is sourced from a **<u>Birth</u>** accession screen.
  - EXAMPLE: A **Release to Wild Location** is sourced from a **Release to Wild** disposition screen.
- If the Event Location information is sourced from fields in a data entry screen other than for that specific transaction type, you can edit or delete it from the Events Location grid.
  - EXAMPLE: A <u>Birth Location</u> is sourced from a field recorded in a <u>From</u> <u>Another Institution</u> accession screen.
- If the Event Location information is not sourced from another data entry screen, you can add/edit/delete it from the Events Location grid.
  - EXAMPLE: You receive an animal from a non-ZIMS using institution that was captured from the wild. Because the <u>Capture From Wild Location</u> information is not included on the <u>From Another Institution</u> accession screen, you can add/edit/delete it in the Events Location grid.
  - EXAMPLE: You want to add information regarding <u>Egg Laid Location</u> for where an egg was laid but a **Birth/Hatch** was recorded when in an incubator.
