

LearnZIMS gives students state-of-the-art, hands-on record keeping tools

Accurate and up-to-date medical records can help make the difference between a proactive zoo that stays on top of its animal care, and a reactive medical team that can barely keep up with its case load.

That's why ISIS (Informational Species Information System) encourages programs that train zookeepers and exotic-animal vet techs to include LearnZIMS (Zoological Information Management System) in their curricula.

LearnZIMS teaches students how to capture medical data in ZIMS for Medical, and how to access data in ZIMS' 40-year-old database, including:

- Weight comparisons
- Physiological reference ranges
- Drug abstracts from global pooled data
- Population overviews

Is your program teaching the cutting edge of medical information management, like the teaching schools and colleges below? Learn more by calling Josh Courteau, ISIS Training Manager, at 1.651.447.5529, or email today.

Institutions using LearnZIMS:

Delaware Valley University (US)
Portland Community College (US)
Roseheath College (UK)
Roskilde Technical College (Denmark)
Van Hall Larenstein (Netherlands)
North Carolina State University (US)
Nottingham Trent University (UK)
Sparsholt College Hampshire (UK)
VIVES-Be (Belgium)
University of Salford Manchester (UK)
Unitec Institute of Technology (NZ)
