Key to Animal Husbandry and Conservation Success!

Sharing Medical Records

You are contacted by an institution that is experiencing some medical problems with their raptor collection. The symptoms sound very much like an issue you had, and were able to successfully resolve, with one of your owls used in education programs.

You are both Gold Level Medical Sharing ZIMS institutions, meaning all medical records are shared and not filtered once sharing is assigned for a record.

You select to share the medical record for the owl with your colleague. He reviews the symptoms, diagnosis and treatments that you provided to your owl. He calls you a month later to let you know that the two affected hawks are doing much better thanks to the information provided in your medical records for the owl.

Sharing is Caring

Thank you to all the ISIS member institutions that have contributed to our global database, making shared information possible.

Medical Records Sharing

☒ Gold Level Sharing ?
☐ Silver Level Sharing ?
☐ Bronze Level Sharing ?
☐ No Sharing

External Medical record sharing: Medical records can be seen by another institution *if both institutions* have external record sharing enabled, *both institutions* have selected a level of medical record sharing and the sharing institution has shared the medical records of the specific animal with the other institution. Record sharing is most commonly associated with animal moves between institutions, allowing both for sharing information prior to confirming a transaction and viewing the medical history of an animal once it has moved to another institution. The types of medical records shared/viewed is controlled by the minimum common level of medical record sharing chosen by each institution; you will never see more record types than you are willing to share. ISIS supports 3 different levels of record sharing. The receiving institution can only view, never edit, the historical medical records.

Start > Institution > Institution Preferences > ZIMS Accessibility and Features

Both Accessibility For External Sharing and the Medical Records Sharing must be turned on.

Records can be selected to be shared from the My Institution module:

External Sharing

Show search form

| Institution | Animal | Taxonomy | Record Type | Created | |
|-------------|---|----------|-----------------------|--------------|--------------------|
| PROVIDNCE | PLT14-00608 [Pelecanus occidentalis/Brown pelicanus] | | Medical, Husbandry | Oct 06, 2014 | Adrienne Miller |

Actions

- + Add New External Sharing
- Edit/Delete External Sharing

They can also be selected to be shared from within the animal record:
