

Animals-Adding Training Information

How to add training information, assign to an animal record and record sessions in ZIMS.

Contact SPECIES360 Support

Before you can assign Training information to an animal's record, you should first define the training behavior/routine. To add a new Training Definition, use the Animal Training Definition Search found in the left hand search box in the Animal module (left). You can also add a new definition directly from within the animal record when you assign a new behavior (right).

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.

	🚽 Save 🚫 Car	ncel

The name of the routine should be short but clearly defined and must be unique. It is important that the description states exactly why the routine is being trained. Here we want to train the animal to put their paw against the bars as a first step towards enabling nail trimming without anesthesia. You can include training steps here, too.

The Training grid is found in the More Details tab in the animal record. Select Actions > Add New to assign the Training behavior to an animal.

The Training Behavior/Routine will appear in the drop down list to select from. Or, you can add a new one here. The Purpose is a multiple select dropdown list. The Status is a single select dropdown where you can update the Status as needed. Since Training is ongoing and never actually ends, it is recommended to record an End Date only if the Training for that specific behavior is discontinued for some reason. Use the Details to capture why you are doing this Training on this specific animal.

Once new Training Info is added to an animal record, you will record training sessions for that specific behavior/routine. Select Add New to open the Sessions screen.

The Session Rating has four options from Excellent to Poor. Aggression is a simple Yes or No and is not mandatory. Recording the Trained By is recommended if there are future questions. Details is where you would describe what was done and the animal reaction.
