

Pathology - Necropsy and Biopsy in ZIMS

Tracking data on disease processes and death records

Contact Species360 Support

From the <u>Medical Dashboard</u> in ZIMS you can initiate a pathology record from the New menu dropdown or with the <u>keyboard short cuts</u> of:

- Shift+N = Necropsy/Death record
- Shift+B = Biopsy record

Necropsy Index

The death screens in ZIMS Medical include eight tabs for:

- 1. <u>Submission</u>
- 2. <u>Case Information</u>
- 3. <u>Gross Necropsy</u>
- 4. <u>Samples and Tests</u> (associated with the Necropsy)
- 5. <u>Measurements</u> (associated with the Necropsy)
- 6. <u>Histopathology</u>
- 7. <u>Images</u>
- 8. Finalization of the record

Additional topics

- Incomplete Dispositions
- Data Shared outside of Medical ZIMS

Necropsy

Submission Information

Captures the core details on the animal who has died. Creating a necropsy record triggers an Incomplete Disposition pending transaction in the Husbandry record if the death has not yet been recorded there. If the death is first recorded in the Husbandry module, some of the Necropsy information will be pre-filled.

Learn more about Incomplete Dispositions below...

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.

Biopsy Index

The biopsy screens in ZIMS Medical include tabs for:

- 1. <u>Submission</u>
- 2. Case Information
- 3. Preliminary Examination
- 4. <u>Samples and Tests</u> (associated with the Biopsy)
- 5. <u>Histopathology</u>
- 6. Images
- 7. Finalization of the record

If a death was recorded in the Husbandry module first, the highlighted data will prefill but is editable. If a death has not yet been recorded in the Husbandry module, saving the information in this tab will create a pending death disposition event (Incomplete Disposition) in the Husbandry record. Once you have 'Saved' the Submission screen, you can enter details on the remaining necropsy record tabs.

If the Necropsy is for a group record, there will be a carcass count option.

Additional Necropsy Records Needed?

If multiple sets of tissues for histopathology (one to the university diagnostic lab and one to a TAG pathology advisor) are sent out, then a second necropsy record can be created to capture the histopathology report from the second pathologist.

A second necropsy record is most common for group GANs where there may be multiple carcasses for the GAN. While a necropsy record has multiple tabs to provide a place for the various details for a complicated postmortem exam, for a simple dissection only gross necropsy (the cause of death is clear) then the extra tabs can be left blank and only complete the basic info, gross report, and final tab.

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.

Saving a submission also generates a calendar item for the pathologist defined in your institutional preferences.

It is typical for husbandry staff to be the responsible parties for necropsy submissions. Supporting this workflow, you can grant access to just creating a submission record to husbandry staff via a custom role. They will not have to have access to the remainder of the pathology record.

The Responsible Pathologist is a staff lookup from the <u>my institution staff options</u> or from the <u>Contact Directory</u> in ZIMS. The Responsible Pathologist can be set to default in Institution Preferences. Notes entered into the Case Info for Husbandry box will be copied into the Note in the Husbandry record. You also have the options to Cleanup the Medical Record (resolve active problems, terminate active prescriptions and remove future Calendar tasks), view the Medical Records or view the Medical Summary from this screen.

The Necropsy Case Info for Husbandry Staff is a note field that will show for the husbandry staff in their note stream within the Husbandry record. It cannot be edited or deleted via the Husbandry module

<u>Click here for more information on linking to documents outside of ZIMS in your notes</u> <u>Return to Index</u>

Gross Necropsy

This is where the initial details of the necropsy report are collected along with possible diagnosis and interpretations.

			A/G ratio [c]			~	

Creating <u>samples</u> from a necropsy record opens an embedded sample creation window in ZIMS Medical necropsy module. Once your samples have been created in the linked samples section, you are able to highlight an individual record and issue a <u>'request</u> <u>test'</u> directly from the necropsy module as well as view/edit the sample test request. You can utilize a pre-defined set of commonly collected samples using the integrated 'Use Sample Template" option.

Samples and Tests from the necropsy record do not appear in the Medical Dashboard but biopsy linked samples and tests will.

You can also move the Sample to Storage by selecting the Move to Storage button.

Record locked by Adrienne Miller on Aug	06, 2019 at 08 43	

When you select to Sign Off on the record, all tabs and data entered are locked and cannot be edited or deleted. Signing Off activates the Addendum and Audit Trail. Notes can be added to the Addendum even after a record is locked. Unlocking a biopsy record can only occur by Medical Admin (Species360) role holders in ZIMS. The Audit Trail will show the actions of locking/unlocking along with the dates and responsible parties.

Return to Index

Incomplete Dispositions

When a necropsy is started on the ZIMS Medical side, and a Death not yet recorded in the Husbandry module, an Incomplete Disposition is created on the Animal Statistics

page. The Incomplete Disposition must be processed (Accepted/Rejected) in the My Transactions tab to finalize the death:

On the My Transactions – Death Record:

- Date
- Discovered Date
- Manner of Death
- Submitted for Necropsy

Are sourced from the Necropsy Submission tab – permissions can be granted to JUST the submission tab to non-medical staff in the Medical Roles

From the Finalize tab in Necropsy:

- Primary Body System
- Relevant Death Info

If this information is changed in Husbandry or Medical, it changes in both locations.

What is Visible Outside of Medical ZIMS?

• When Incomplete Disposition is accepted, and death transaction added, global status changes to 'dead' – this is managed separately from the Medical record
