

MULTIPLE ENCLOSURE ASSIGNMENT

The impact on animal moves and Enclosure Tree organization when this feature is used.

[Contact Species360 Support](#)

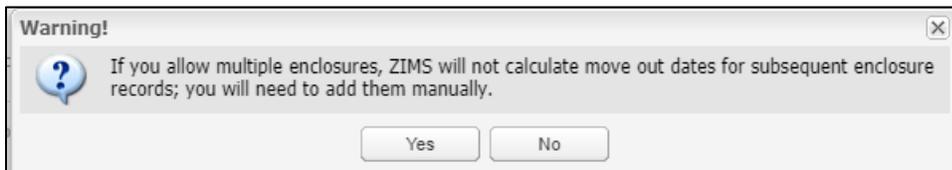

Multiple Enclosure Assignment allows you to put an animal or a group in to multiple enclosures at the same time. To activate this function, go to Start > Institution > Institution Preferences > Enclosure Preferences and check the Allow Multiple Enclosure Assignment checkbox.

The screenshot shows the 'Enclosure Preferences' dialog box. At the top, there are navigation buttons: 'Back', 'Save', and 'Save & Apply For All Users'. Below this, there are two sections: 'Default Enclosure Category & Type' and 'Default Enclosure & Collection'. In the first section, 'Enclosure Category for New Enclosures' is set to 'Terrestrial' and 'Enclosure Type for New Enclosures' is set to 'Exhibit'. The 'Allow Multiple Enclosure Assignment' checkbox is checked and highlighted with a red rectangular box. In the second section, 'Enclosure' is set to 'Greenville Zoo' and 'Collection' is set to 'Main Institution Animal Collection'.

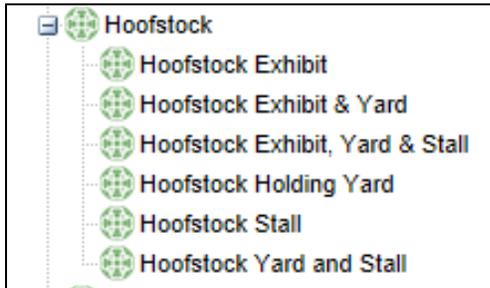

This functionality is available only as an Institution Preference. Users cannot select it using My Preferences. As with all Preferences, it will not become active until you log off and log back in again.

You will receive a message that when this feature is active ZIMS will not automatically record a Move Out Date for the previous enclosure. This is because ZIMS does not know if the animal or group remains in the enclosure or not.

The screenshot shows a 'Warning!' dialog box with a question mark icon. The text inside reads: 'If you allow multiple enclosures, ZIMS will not calculate move out dates for subsequent enclosure records; you will need to add them manually.' At the bottom, there are two buttons: 'Yes' and 'No'.

Using Multiple Enclosure Assignment may impact how you set up your Enclosure Tree. If a single enclosure only is allowed you would need to create an enclosure to capture all combinations and possibilities.

With multiple enclosures you only need to record each enclosure as you can pick one, two or three of them.

For our example you have a Nigerian dwarf goat that was placed in the Goat Stall enclosure for quarantine. You have now let him out into the Goat Holding and the Goat Exhibit enclosures. From the Enclosure grid go to Actions > Record Current Enclosure.

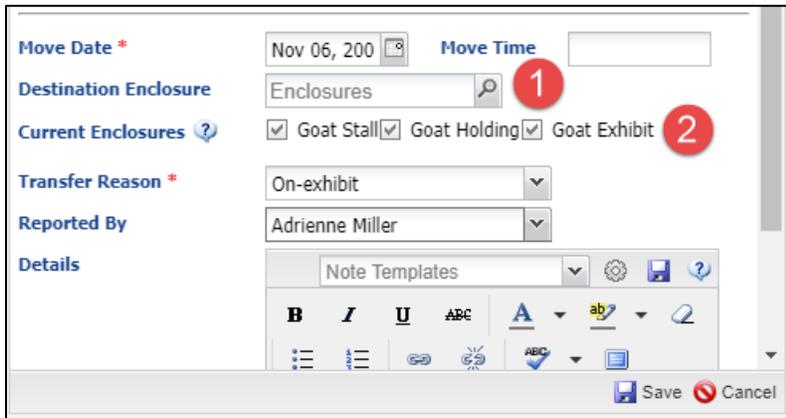

The following note is at the top of the page.

Please Note: When you move an animal into an enclosure, there is only one record stored for that move. It consists of a move in date, move out date, note, responsible party, and move in reason. On this screen, we are allowing both move in and move out to be recorded. For enclosure move outs, **only the move out date will be saved**. The note, responsible party, and move in reason **will not be saved** as it will not overwrite your original values you recorded when you moved the animal in.

In short, this statement lets you know that if you record moving an animal out of an enclosure when Multiple Enclosure Assignment is active the original information recorded for the Move In to the enclosure (notes, responsible party and move in reason) will not be overwritten.

After you record the Move Date enter any enclosures the animal is being moved in to in the Destination Enclosure field (1). Once you accept them they will display as a Current Enclosure (2). Because the goat still has access to the Goat Stall you leave that enclosure checked.

It is the mission of Species360 to facilitate international collaboration in the collection and sharing of information on animals and their environments for zoos, aquariums and related organizations.

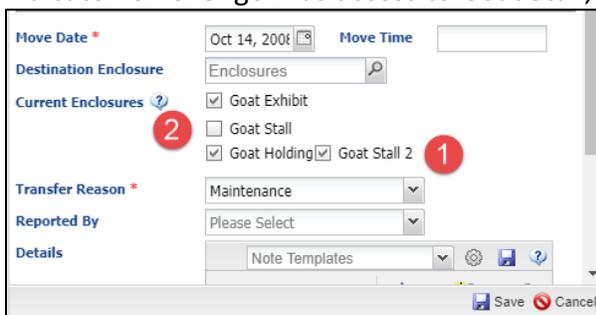

When you save the record will show that the goat is occupying the stall, the holding and the exhibit all at the same time.

Enclosure Name	Moved In	Moved Out
Goat Holding	Nov 06, 2007	-
Goat Exhibit	Nov 06, 2007	-
Goat Stall	Sep 20, 2007	-

The stall is being renovated so the goat no longer has access to it and instead has access to Goat Stall 2. Select Actions > Record Current Enclosure. Add Goat Stall 2 as a Destination Enclosure (1). To indicate he no longer has access to Goat Stall, uncheck that enclosure (2).

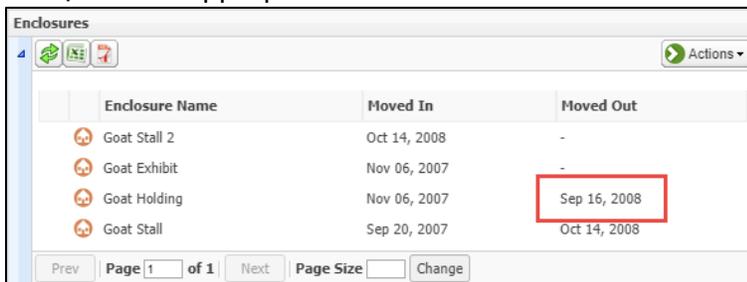

The record displays the new stall and the Move Out date for the original stall.

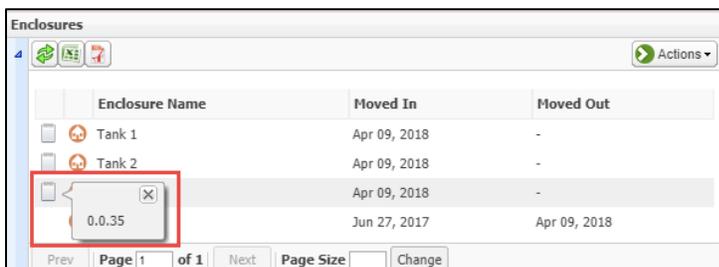

Enclosure Name	Moved In	Moved Out
Goat Stall 2	Oct 14, 2008	-
Goat Holding	Nov 06, 2007	-
Goat Exhibit	Nov 06, 2007	-
Goat Stall	Sep 20, 2007	Oct 14, 2008

If you need to move an animal out of an enclosure without adding a new one, simply select to View/Edit the appropriate enclosure and record a Move Out date. The record will reflect the change.

Enclosure Name	Moved In	Moved Out
Goat Stall 2	Oct 14, 2008	-
Goat Exhibit	Nov 06, 2007	-
Goat Holding	Nov 06, 2007	Sep 16, 2008
Goat Stall	Sep 20, 2007	Oct 14, 2008

Sometimes multiple enclosures are used for a single group that occupies many enclosures. For example, you have 50 Atlantic bumpers with one record, GAN and Local ID. Ten are in Tank 1, 5 are in Tank 2 and the remaining 35 are in Tank 3. For each Tank you can record the number of occupants in the Details section.

Enclosure Name	Moved In	Moved Out
Tank 1	Apr 09, 2018	-
Tank 2	Apr 09, 2018	-
Tank 3	Apr 09, 2018	-
0.0.35	Jun 27, 2017	Apr 09, 2018

It is important to note that when multiple enclosures are used this way, if an enclosure prescription is recorded against one of the enclosures the entire group will show as exposed to that prescription because ZIMS cannot tell the occupants of each Tank apart. In addition, Inventory Reports, Enclosure Reports and Occupants Lists do not have the ability to show portions of a group. So, in an Enclosure Report for example, each tank would display with 50 Occupants. These are important considerations when deciding to use Multiple Enclosure Assignment for one group in several different enclosures.
